

Your cows have something to look forward to

Invest in KVIA cow brushes if you want cow brushes that will last. Our cow brushes are manufactured in accordance with sustainable principles. All KVIA cow brushes are made of stainless steel and feature an energy-saving motor and a helical gear, which drives the brush with an impressive 98% efficiency. In addition, all brushes have a unique, energy-saving control system.

From car wash to cow brush

KVIA is a family-run business and has been manufacturing brushes since 1981. We began producing stainless-steel lorry and bus washing systems in Copenhagen, before moving our production to Vejle.

In 2014, at the request of various companies in the agricultural sector, we embarked on a new venture to design a different kind of brush, a cow brush. We were presented with three significant principles and important elements for the design:

1. Brushes must be suspended, attached, fitted and secured to avoid falling
2. Safe, secure, and unbreakable circuit boards
3. All connecting cables must be fitted securely to avoid breakage and damage.

In association with experienced farmers, we were instructed and recommended that all brushes should be attached to a universal joint, to safeguard collapsing. In addition to this, the brush should also guarantee free movement and flow for top performance. We then designed our very first cow brush – Karoline – which looks pretty much the same today. Later came Molly, Otto and Nora.

Professional advice on high-quality cow brushes

We will provide you with all the highest professional advice you require, enabling you to choose the perfect brush solution to suit your cows and the size and arrangement of your cowshed.

We contribute to your cows' welfare

Our cow brushes do not simply enable your cows to groom themselves. Cow brushing increases blood circulation reduces risks of skin disease and -conditions. Access to cow brushes enhances welfare and reduces stress, which in turn has a positive impact on milk yield.

Did you know that access to rotating brushes, enhances cows' welfare which has a positive impact on the milk yield?

**BEST
BECAUSE
IT LASTS**

We ensure quality so that you get more time, time to care for your cows

If you are looking for a long-lasting cow brush, a KVIA cow brush is the perfect choice. We believe that you should spend your time on your cows instead of on your cow brushes.

KVIA cow brushes are produced with top quality materials and components, and we guarantee you an energy-saving and long-lasting cow brush. We produce our cow brushes in stainless steel. All our brushes are robust, vigorous, and match the harsh environment of the cowshed. The motor and helical gear are fixed on a bracket that does not swing with the brush, thereby preventing broken cables. A KVIA cow brush uses 50-66% less power in comparison to similar brushes on the market and requires minimum maintenance.

Specifications:

- **Tail protection** – in case of overload, brushes change direction and rotate twice
- **Stainless-steel structure and brush bearing**
- **Low energy** – saves 50-66% in comparison with similar brushes on the market
- **Easy maintenance**
- **Frequency control with soft start/stop function**
- **Changes rotational direction with each start-up**
- **Extended 2-year warranty period on the technical components**
- **Quick and easy brush replacement**

The Karoline Cow Brush – the perfect all-round cow brush for dairy cows and heifers

Karoline is perfect for all cows, whatever size, and is particularly suitable for heifers. Karoline was designed for optimal grooming. The hourglass shape of this brush, grooms the head, back, tail and sides.

The result is a very clean and shiny coat. Several cows can enjoy Karoline simultaneously. The size and low weight of the brush makes it easy for the cow to balance the brush.

Karoline starts via a motion sensor when the cow pushes the brush. The brush stops automatically when it has not been activated for 50 seconds.

After each start-up, the brush changes rotational direction. This feature extends the wear and tear of the brush elements. Overload protection ensures the brush stopping in the event of a cow tail becoming entangled in the brush. To power the brush, simply plug Karoline into an ordinary earthed socket (230 volts).

The Otto Cow Brush – a superb brush and perfect when space is limited

We designed Otto for cowsheds where space is limited. Otto is suitable for both dairy cows and heifers. Otto provides excellent grooming, focusing on the head, back, and tail, resulting in a fresh and shiny coat. Otto provides in-depth grooming of the head, tail area and pin bones. The meticulous brushing prevents many forms of skin conditions.

Otto starts via a motion sensor when the cow pushes the brush. The brush stops automatically when it has not been activated for 90 seconds. After each start-up, the brush changes rotational direction. This feature extends the wear and tear of the brush elements. Overload protection ensures the brush stopping in the event of a cow tail becoming entangled in the brush. To power the brush, simply plug Otto into an ordinary earthed socket (230 volts).

The Molly Cow Brush – the cow brush for in-depth grooming

Molly performs perfectly and has it all. Molly is designed to groom intensively and in-depth. The round cone shape of the Molly brush grooms each side, while the top brush grooms the head, back and tail area. Molly delivers in-depth grooming of the pin bones and tail head. The intensive brushing reduces risks of skin disease and -conditions. Several cows can enjoy Molly simultaneously. The size and low weight of the brush makes it easy for cow to balance the brush.

Molly starts via a motion sensor when the cow pushes the brush. The brush stops automatically when it has not been activated for 50 seconds. After each start-up, the brush changes rotational direction. This feature extends the wear and tear of the brush elements. Overload protection ensures the brush stopping in the event of a cow tail becoming entangled in the brush. To power the brush, simply plug Molly into an ordinary earthed socket (230 volts).

The Nora Cow Brush – a non-motorized cow brush

Nora is suitable for all dairy cows and heifers. Nora complies with Danish legislation - Rotating Brushes for Dairy Cattle.

Nora performs superbly when dairy cows or heifers use the brush by pushing it. The brush responds and rotates accordingly. The flexible universal joint enables the cow or heifer to be groomed from all directions, and several animals can use the brush simultaneously.

We designed Nora with quality and sustainability in mind. The structure and brush shaft are made with components that guarantee a long-lasting brush, with low maintenance costs. Nora is made of stainless steel and installed with a strong universal joint. Nora has no motor, and no plug-in connection cables.

The Nora brush can be used for dairy cows, heifers, horses, goats and sheep, for optimal coat care and enhanced animal welfare.
